Faculty of Science & Technology

Revised Structure

For

First Year
Bachelor of Engineering
(Choice Based Credit System)

(2019 Course)

(With Effect from Academic Year 2019-20)

TABLE -1 First Engineering _Structure for Semester-I														
Course Code	**Course Name**	**Teaching Scheme (Hours/Week)**			**Examination Scheme and Marks**						**Credits**			
		Theory	**Practical**	**Tutorial**	**ISE**	**ESE**	**TW**	**PR**	**OR**	**Total**	**TH**	**PR**	**TUT**	**Total**

107015		--	Physical Education-Exercise and Field Activities											

Instructions:

- PR/Tutorial must be conducted in three batches per division.
- Minimum number of required Experiments/Assignments in PR/ Tutorial shall be carried out as mentioned in the syllabi of respective subjects.
- Every Student should appear for Engineering Physics, Engineering Chemistry, Engineering Mechanics, Basic Electrical Engineering, Basic Electronics Engineering, Programming and Problem solving during the year.
- College is allowed to distribute Teaching workload of subjects Engineering Physics, Engineering Chemistry, Basic Electrical Engineering, Basic Electronics Engineering, Engineering Mechanics, Programming and Problem solving in semester I and II dividing number of FE divisions into two appropriate groups.
- Assessment of tutorial work has to be carried out as term-work examination. Term-work Examination and Practical Examination at first year of engineering course **shall be internal continuous assessment only.**

Ω 1 Credit for Engineering Graphics theory has to be awarded on the basis of End semester examination of 50 marks while 1 credit of tutorial and practical **shall be awarded on internal continuous assessment only**.

@ Credit for the course of workshop practical is to be awarded on the basis of continuous assessment / submission of job work.

§ Project based learning (PBL) requires continuous mentoring by faculty throughout the semester for successful completion of the tasks selected by the students per batch. While assigning the teaching workload a load of 2 Hrs/week/batch needs to be considered for the faculty involved. The Batch needs to be divided into sub-groups of 5 to 6 students. Assignments / activities / models/ projects etc. under project based learning is carried throughout semester and Credit for PBL has to be awarded on the basis of internal continuous assessment and evaluation at the end of semester.

& Audit course for Environmental Studies and II (As per D.O.No.F.13-1/2000 (EA/ENV/COS-I) dated 14 May, 2019) is mandatory but non-credit course. Examination has to be conducted at the end of Sem I & II respectively for award of grade at college level. Grade awarded for audit course shall not be calculated for grade point &CGPA.

Audit course for Physical education is mandatory non-credit course. Examination has to be conducted at the end of Semester for award of grade at college level. Grade awarded for audit course shall not be calculated for grade point &CGPA.

SIDDHANT COLLEGE OF ENGINEERING SUDUMBARE, PUNE.

Academic Calendar for First Year Engineering

AY 2022-23 SEM – I

Date:- 10/11/2022

Sr. No.	Details of Activities	Day & Dates
1	FE Induction Programme	17/11/2022 To 22/11/2022
2	Commencement of Teaching	Thursday, 23/11/2022
3	Unit test /Class Test on (unit 1 and 2)	Wednesday, 28/12/2023 To Friday, 06/01/2023.
4	Display of First (Monthly) defaulter student list on notice board.	Friday, 30/12/2023
5	SPPU In- semester Examination	Monday, 09/01/2023 to Friday, 13/01/2023 as per SPPU circular.
6	Display of Second defaulter student list on notice board.	Friday 31/01/2023
7	Unit test/ class test (on unit 3 and 4)	Tuesday,02/02/2023 to Wed, 09/02/2023
8	First Parent meet	Thursday, 16/02/2023
09	Preliminary examination	27/02/2023 To 03/03/2023
	Display of Third defaulter student list on notice board.	Friday, 10/ 03/2023
10	Term work submission and Term End	06/03/2023 To 07/03/2023
11	SPPU End semester Theory Examination	20/03/2023 To 30/03/2023(tentative date)

Note: -

1. Dates for above activities may changes depending upon list of Holidays. These will be discussed from time to time in the meeting with Principal, Academic Director, Academic Co-ordinator and Head of the Departments.
2. Slot of departmental students activities will be declared in due to course.

Prepared by:-
Prof. R. S. More

FE Coordinator
Dr. U. V. Shinde

Academic Calendar for First Year Engineering Dept.

AY 2022-23 SEM – II

Date:- 31/03/2023

Sr. No.	Details of Activities	Day & Dates
1	Commencement of Teaching	Monday, 10/04/2023
2	Technical Event	Monday,24/04/2023 To Tuesday, 25/04/ 2023
3	Sport	Wednesday, 26/04/2023 To Friday, 28/04/2023
4	Cultural Event	Saturday, 29/04/2023
5	Display of First (Monthly) defaulter student list on notice board.	Monday, 01/05/2023
6	Unit test /Class Test-I on (unit 1 and 2)	Monday,8/05/2023 to Friday, 12/05/2023
7	SPPU In-semester Examination	Monday, 15/05/2023 To Friday,19/05/2023
8	Display of Second (Month) defaulter student list on notice board.	Wednesday, 31/05/2023
9	Unit test /Class Test-II on (unit 3 and 4)	Wednesday, 28/05/2023 To Friday, 07/06/2023.
10	Parents meet	Thursday, 15/06/2023
11	Guest lectures (Subject Experts)	Monday,26/06/2023 To Friday ,30/06/2023
12	Display of Third (Month) defaulter student list on notice board.	Friday 31/06/2023
13	Preliminary examination	Monday,17/07/2023 To Friday, 21/07/2023
14	Students Feedback	Friday, 21/07/2023
15	Remedial Classes	Monday,17/07/2023 To Friday, 21/07/2023
16	Display of Final defaulter student list on notice board.	Thursday, 20/07/2023
17	Term work submission and Term End	Friday, 21/07/2023 To Monday, 24/07/2023
18	SPPU End semester Theory Examination	Tuesday, 01/08/2023 To Thursday, 10/08/2023 (tentative date)

Note: -

1. Dates for above activities may changes depending upon list of Holidays. These will be discussed from time to time in the meeting with Principal, Academic Director, Academic Co-ordinator and Head of the Departments.

Assignment No-1

Q-1) What is hardness of water? Explain temporary and permanent hardness of water.

⇒ Hardness of water:-

The water which will not give foam formation but will give precipitate on addition of soap solution is called hardness of water.

The hardness of water is due to dissolved salts

For Eg:- Carbonate salts

- $Mg(HCO_3)_2$, $Ca(HCO_3)_2$, $Na(HCO_3)_2$

Non-Carbonate Salts

- $CaCl_2$, $MgCl_2$, $MgSO_4$, $CaSO_4$ & Nitrates of Fe, Mg, Ca, Mn

i) Temporary Hardness:-

The hardness which we can remove by boiling the water is called as temporary hardness / Carbonate hardness / Alkaline hardness

$$Ca(HCO_3)_2 \xrightarrow{\text{Boil}} CaCO_3 \downarrow + CO_2 \uparrow + H_2O$$

$$Mg(HCO_3)_2 \xrightarrow{\text{Boil}} Mg(OH)_2 \downarrow + CO_2 \uparrow + H_2O$$

ii) Permanent Hardness:-

The hardness which cannot be removed by boiling is called as permanent hardness / Non-Carbonate / Non-Alkaline Hardness

Eg:- $MgSO_4$, $CaSO_4$, $MgCl_2$, $CaCl_2$

Q.8] What is alkalinity of water? State the types of alkalinity. How alkalinity of water is described?

⇒ i) Alkalinity of water is ability of water to neutralise the acids.

ii) Alkalinity is due to presense of HCO_3^-, CO_3^{2-} or of sodium, Potassium, calcium and magnesium.

iii) Depending on types of anions present alkalinity is classified as bicarbonate alkalinity carbonate alkalinity and hydroxide alkalinity

* The type and amount of alkalinity present in water sample may be determined by titrating water sample with the standard acid using phenophthalein and methyl orange indicators.

* The determination is based on following reactions:-

i) $OH^- + H^+ \longrightarrow H_2O$

ii) $CO_3^{2-} + H \longrightarrow HCO_3^-$

iii) $HCO_3^- + H^+ \longrightarrow H_2O + CO_2$

Procedure for determination

i) Fill the burette with 0.5 N H_2SO_4

ii) Take in conical flask water sample

iii) Add 0.3 drops of phenolaphthalin indicator (the pink colour is due to presence of strong alkali OH^- and CO_3^-)

iv) Add drop wise acid solution from burette with continuous steering to till pink colour gets

disappear.

v) Add 2-3 drops of methyl orange indicator we get faint yellow color.

vi) Continue the titration till yellow → Pale orange

Formula to find alkalinity of water

ppt alkalinity (P) = $\frac{V_1 \times N \times 50 \times 1000}{V}$ mg/dit

methyl orange (M) = $\frac{V_2 \times N \times 50 \times 1000}{V}$ mg/dit

V_1 = volume of acid consumed for ppt

V_2 = volume of acid consumed for m

N = Normality of acid in burette

V = volume of water.

Q.8] State the ## types of boiler and explain the ill effects of boiler.

⇒ i) The most important use of water in industries of steam generation using boilers. The boilers feed water should be free from impurities in order to avoid troubles inside the boiler.

a Types of Boiler:

i) Low Pressure boiler ⇒ 70-85 ppm

ii) Medium Pressure boiler ⇒ 10-40 ppm

iii) High Pressure boiler ⇒ 0-3 ppm

ii) Ill effects of boiler:- If the boiler feedwater is not up to the standard limit it gives rise to number of problems or ill effect of

Assignment No-2

Q-1] What is wet corrosion? Explain the H2 evolution and O2 absorbtion corrosion mechanism.

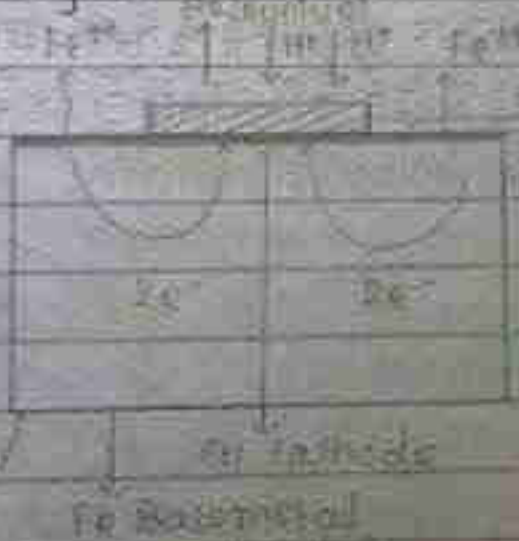
→ Wet corrosion is also known as indirect or immersed corrosion. Wet corrosion occurs due to following two conditions:-

i) When conducting liquid is in contact with metals

ii) When two dissimilar metals are in contact in presence of conducting medium.

1) H2 evolution corrosion:- (Corrosion in Acidic medium)

- These type of electrochemical corrosion always occurs in acid medium, acidic environment like industrial waste.
- Suppose steel tank containing acidic industrial waste and a small copper scrap are in contact with electrolyte, at that time cu scrap acts as a cathode and steel tank acts as a anode & steel tank undergoes corrosion:-



- The oxidation and reduction reaction takes place at anode and cathode is as follows.

At anode.

$$Fe(s) \longrightarrow Fe^{++} + 2e^- \quad \text{--- (oxidation)}$$

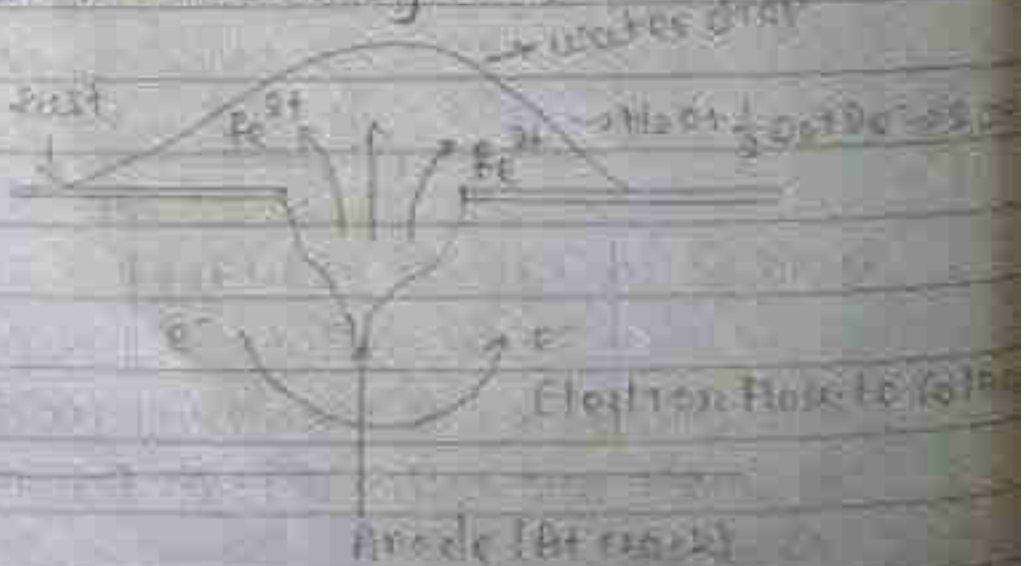
At cathode

$2H^+ + 2e^- \longrightarrow H_2\uparrow$ ... (Reduction)

- At anode, Iron passes into electrolyte in the form of Fe^{++} ions while, at cathode the ions form Acidic electrolyte combines with electron and evolution of H_2 gas takes place at cathode

2) Corrosion in alkaline or neutral medium or O_2 absorption corrosion mechanism:-

- These type of electrochemical corrosion occurs when electrolyte is neutral or alkaline containing dissolved O_2.
- Consider A steel plate lying on the ground and expose to atmosphere. The MO film is formed on the surface of steel plate and it is ruptured at one pe place (having small plate and it is ruptured at one place (having small crack) & whole assembly is contact with alkaline or neutral medium as shown in below diagram.



- This type of protection method is used for such a metal which shows positivity phenomenon & the passivity is nothing but metals have corrosion resistance tendency even though they are placed in higher position in galvanic series.

* Application of Protective coating:-
- chemical reactors, tanks.
- pipes carrying corrosive liquids.

* Advantages:-
- Anodic protection has greater throwing power than cathodic protection hence quite complex structures can be protected.
- it requires low current density hence its operation cost is low.

Q-8] What is cathodic and anodic coating? Which is more protective & why?

⇒ • Cathodic coating:-
Cathodic coating is a type of electrochemical process in which we can protect a metal surface by making it the cathode in the electrochemical cell.
• Anodic coating:- it is a type of electrochemical process in which we can protect a metal surface by making it the anode in the

electrochemical cell

- In these basemetal remains same until unless and until there is a proper metal coat but if coat get ruptured or having crack the corrosion of base metal start because base metal is anode and in presence of oxygen and moisture it undergoes oxidation. Therefore anodic coating is more effective than cathodic coating.

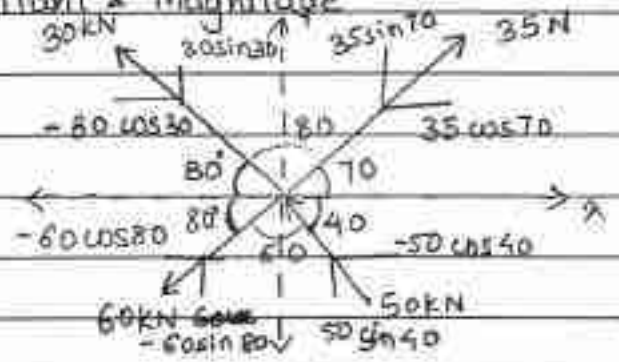
Roll No: 254

UNIT-TEST-1

UT-1

8/12/22	SUB: Engineering Mechanics	Sanket. R. W Div -(B), BE (FY) Roll no:- 254

Q 1) Find resultant & magnitude



$$\Sigma f_x = R_x = 35\cos(70)^\circ - 30\cos(30)^\circ - 60\cos(80)^\circ - 50\cos(40)^\circ$$
$$= -62.73 \text{ kN}$$

$$\Sigma f_y = R_y = 35\sin(70)^\circ + 30\sin(30)^\circ - 60\sin(80)^\circ + 50\sin(40)^\circ$$
$$= 21 \text{ kN}$$

$$R = \sqrt{(R_x)^2 + R_y)^2} = \sqrt{(-62.73)^2 + (21)^2}$$
$$R = 66.15 \text{ kN}$$

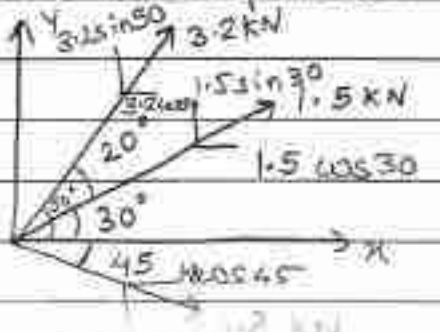
$$\tan\theta = \frac{R_y}{R_x}$$

$$\therefore \theta = \tan^{-1}\left(\frac{R_y}{R_x}\right) = \tan^{-1}\left(\frac{21}{62.73}\right)$$

$$\boxed{\theta = 18.5}$$

Q2) Determine X & Y components for each force

F.B.D



For force 1.5kN The components are

I

for force 3.2 kN The components are

$x = 3.2 \cos 50° = 2.055$ kN

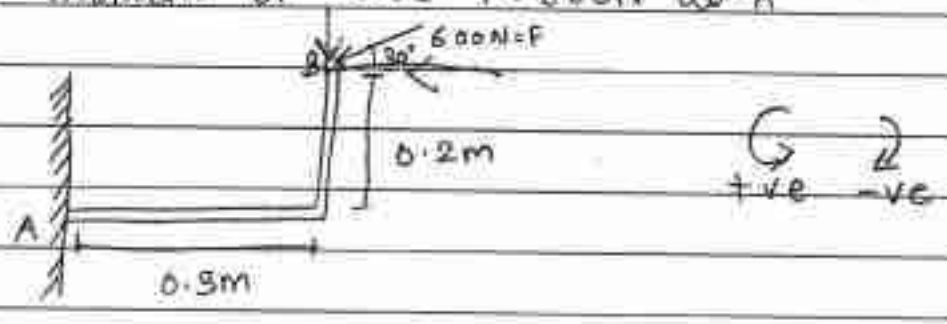
$y = 3.2 \sin 50° = 2.45$ kN

for force 1.8kN the components are

$x = 1.8 \cos 45° = 1.272$ kN

$y = -1.8 \sin 45° = -1.272$ kN

(3) Find moment of force F = 600N about A

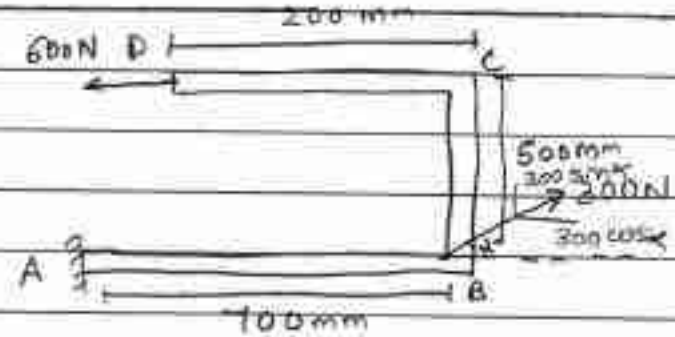


Moment at A (M_A) = (600 × 0.3)

M_A = 1800 N.m

∴ The moment about A of force 600 is 180 N.m

4)



Given :-

$M_A = 405$ N m

Find 2 value of α (0 ≤ α ≤ 180)

$M_A = (600 \times 0.5) + (300 \sin\alpha \times 0.7)$

$405 = 300 + 210 \sin\alpha$

$\therefore 405 - 300 = 210 \sin\alpha$

$\therefore 210 \sin\alpha = 105$

PAGE NO.:
DATE: / /

$\alpha = 30$

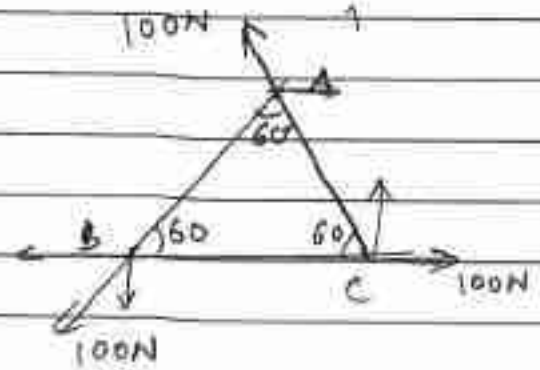
$\therefore 0 \leq \alpha \leq 180$

$\therefore \quad 180 - \alpha = 180 - 30$

$= 150°$

$\therefore \quad \boxed{\alpha = 30}, \quad \boxed{\alpha = 150}$

Q5 Determine magnitude & Direction.

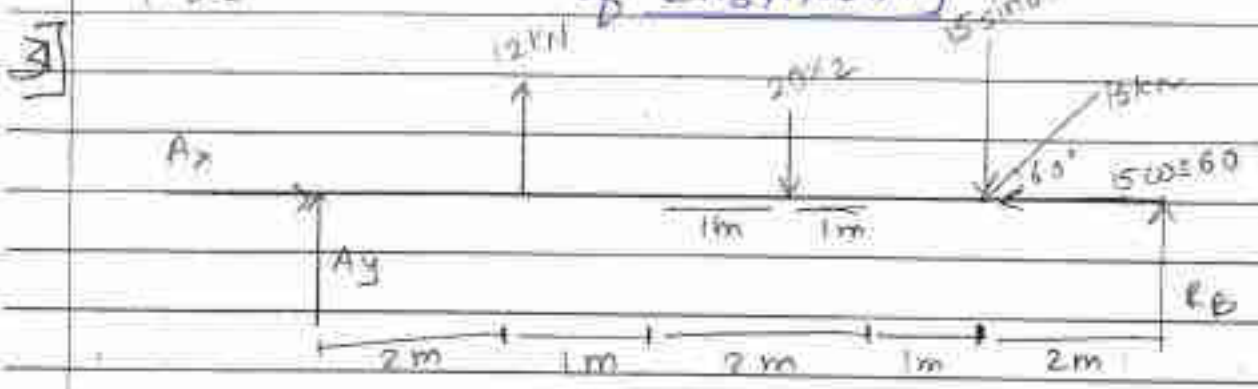


Mechanics — UNIT Test II — 22/30 — Roll No. 254

Engineering — 8-02-23

Questions:- Siddhant college of Engineering — UNIT TEST-II

F.B.D



$\Sigma fx = 0$

$= Ax - 15\cos 60$

$Ax = 7.5$ N

$\Sigma fy = 0$

$\Rightarrow Ay + 12 - 40 - 15\sin 60 + R_B$

$Ay + R_B = 40 + 15\sin 60 - 12$

$Ay + R_B = 41$

$\therefore Ay = 14.25$ N

$\Sigma M_A = (12 \times 2) - (40 \times 4) - (15\sin 60 \times 6) + (R_B \times 8)$

$8R_B = (40 \times 4) + (15\sin 60 \times 6) - (12 \times 2)$

$R_B = \frac{214}{8}$

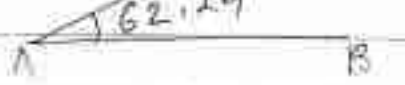
$R_B = 26.75$ N

$R_A = \sqrt{(7.5)^2 + (14.25)^2}$

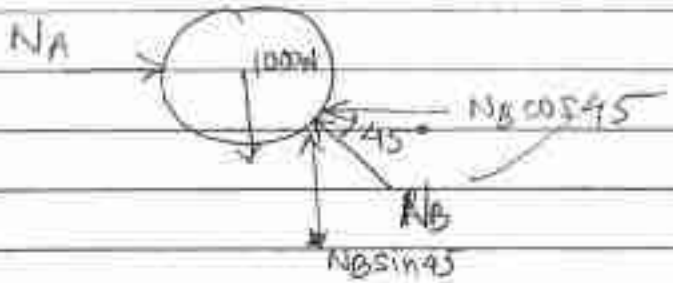
07. $R_A = 16.10$ N

$\therefore \theta_A = \tan^{-1}\left(\frac{14.25}{7.5}\right)$

$\theta_A = 62.24$



1] F.B.D



$\Sigma f_x =$

$N_A - N_B \cos 45$

$N_A = 1000\,N$

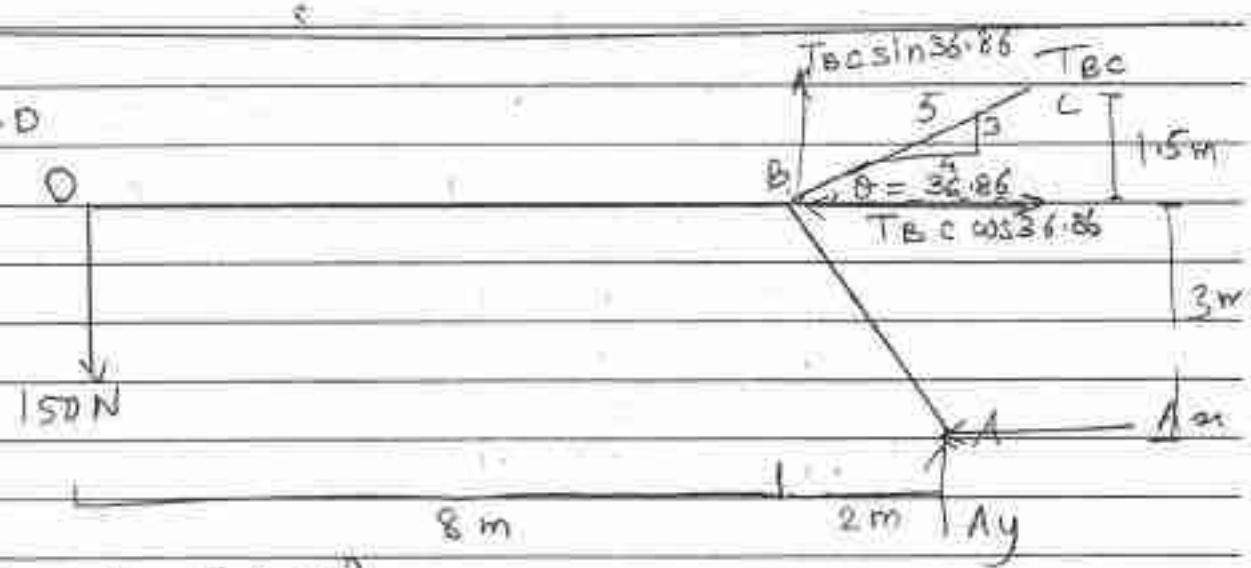
$\Sigma f_y = -1000 + N_B \sin 45$

$N_B = \frac{1000}{\sin 45}$

or

$N_B = 1414.21\,N$

2] F.B.D



$\theta = \tan^{-1}\left(\frac{3}{4}\right)$

$\therefore \Sigma f_x = -A_x + T_{BC} \cos 36.86 = 0$

$A_x = T_{BC} \cos 36.86 = 0$

or

$\Sigma f_y = -150 + A_y + T_{BC} \sin 36.86$

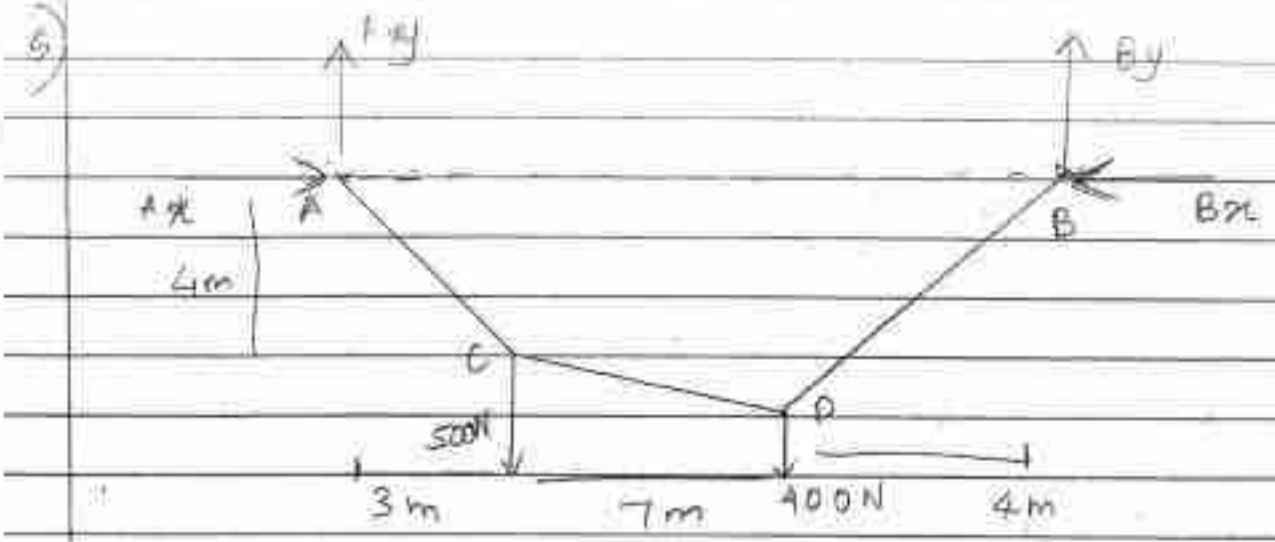
$A_y + T_{BC} \sin 36.86 = 150$

$\Sigma M_A = (150 \times 10) + (T_{BC} \cos 36.86 \times 3) = 0$

$T_{BC} \cos 36.86 = +1500$

$T_{BC} = 1874.75$

5)



$\Sigma f_x = 0$

$\Rightarrow Ax - Bx = 0 \quad \therefore Ax = Bx$

$\boxed{Bx = 380.36}$

$\Sigma F_y = 0 + Ay + By - 500 - 400$

$Ay + By = 900$

$\boxed{Ay = 507.15}$

$\Sigma M_A = (-500 \times 3) - (400 \times 10) + (By \times 14)$

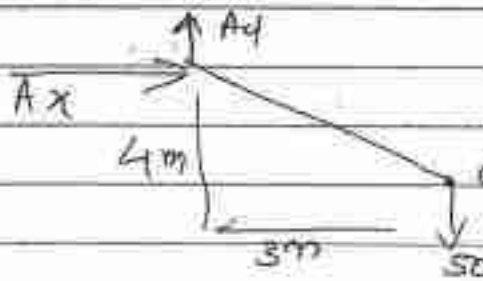
$14By = (500 \times 3) + (400 \times 10)$

$= 1500 + 4000$

$By = \frac{5500}{14}$

$\boxed{By = 392.85}$

F.B.D of AC



$\therefore \Sigma M_C = (-Ax \times 4) + (Ay \times 3)$

$4Ax = 3Ay$

$4Ax = 3 \times 507.15$

$\boxed{Ax = 380.36}$

$R_A = \sqrt{(380.36)^2 + (507.15)^2}$

$R_A = 633.93\ N$

$\theta_A = \tan^{-1}\left(\frac{A_y}{A_x}\right)$

$= \tan^{-1}\left(\frac{507.15}{380.36}\right)$

$\theta_A = 53.13$

$R_B = \sqrt{(380.36)^2 + (392.85)^2}$

$R_B = 546.81$

θ_B

$\theta_B = \tan^{-1}\left(\frac{392.85}{380.36}\right) \Rightarrow \theta_B = 45.92$

Maximum Tension is at R_A

$T_{AC} = 633.93\ N$

F.E. PRELIMINARY EXAMINATION

SEMESTER – I A.Y.2022-23

PROGRAMME OF F.E.(2019 COURSE)(CREDIT SYSTEM)

INSTRUCTIONS FOR CANDIDATES

- Candidates are required to be present at the examination centre, THIRTY MINUTES before the stipulated time.
- Candidates are forbidden from taking any material into the examination hall that can be treated as a malpractice.
- Candidates are requested to see the Notice Board at their center of examination regularly for changes if any that may be notified later in the program.
- No request shall be granted for change in time or date for the University Examination on any ground.
- Candidates are requested to note the Day, Date and Time of Paper.
- Candidates are permitted to use stencils at the time of examination.
- The exchanges of side-rules, drawing instruments of other materials used in the examination hall is not permitted at the time of examination. Candidates must bring their own instruments and will not be allowed to borrow from each other under any circumstances.
- Use of non-programmable battery operated electronic pocket size Calculator is allowed. The exchange of Calculators is not allowed. Electronics Devices including mobile are not allowed at the time of examination.
- The written examination will be conducted in the following order.

SIDDHANT COLLEGE OF ENGINEERING

F.E. PRELIMS EXAMINATION

ENGINEERING PHYSICS

(2019 PATTERN) (Semester-II)

[Time: 2½ Hours] *[Maximum Marks: 70]*

Instructions to the candidates:

1) Answer Q1 or Q2, Q3 or Q4, Q5 or Q6, Q7or Q8.
2) Neat diagrams must be drawn wherever necessary.
3) Figures to the right side indicate full marks.
4) Use of logarithmic tables slide rule, Mollier charts, electronic pocket calculator and steam tables is allowed. 5) Assume suitable data, if necessary.

Physical Constants :
1) Mass of Electron (M_e) = 9.1×10^{-31} kg
2) Charge on Electron (e) = 1.6×10^{-19} C
3) Mass of Proton (M_p) = 1.673×10^{-27} kg
4) Mass of neutron (M_n) = 1.673×10^{-27} kg
5) Velocity of light (c) = 3×10^8 m/s
6) Plank's constant (h) = 6.63×10^{-34} J.s

Q.1 a) Derive an equation for energy of a particle enclosed in 1D rigid box or in an infinite potential well. [6]

b) State and explain Heisenberg's uncertainty principle. [4]

c) Calculate de Broglie wavelength of electron having kinetic energy 1KeV [4]

d) Derive the expression for de Broglie wavelength for a particle when it is moving with kinetic energy 'E'. [4]

OR

Q.2 a) Derive Schrodinger's time independent wave equation. [6]

b) State the de Broglie hypothesis and explain any three properties of matter waves. [4]

c) What is wave function Ψ? Write mathematical conditions well behaved wave function [4]

d) Lowest energy of an electron trapped in potential well is 38 eV. Calculate the width of well in A.V. [Given : Mass of electron 9.1×10^{-31} kg, plank constant 6.63×10^{-34} J-s, charge on electron 1.6×10^{-19} C. [4]

Q.3 a) Explain Hall effect with figure. Derive the equation of Hall voltage and Hall coefficient. [6]

b) What is fermi level in a semiconductor? With the neat labelled diagram, draw the position of fermi level in N Type & P Type semiconductor at 0° K. [4]

c) State the advantages (any two) and applications (any two) of solar cell. [4]

d) A copper strip 2.0 m wide, 1.0 mm thick is placed in a magnetic field of 1.5T. If a current of 200 A is set up in the strip, calculate the Hall voltage that appears across the strip. Assume RH = 6×10^{-7} m^3/C. [4]

OR

Q.4 a) Define Fermi level in metals. Write Fermi-Dirac probability distribution function and explain the meaning of each term. [6]

b) Draw a neat and labelled diagram showing I-V characteristics of a solar cell. Write the equations for fill factor and efficiency of solar cell. [4]

c) Define fermi level in conductors and semiconductors. Draw the position of fermi level in intrinsic, N – type & P - type semiconductors. [4]

d) Calculate the mobility of charge carriers in doped silicon whose conductivity is 10 ohm .m and the Hall coefficient is 3.6×10^{-4} m^3/c [4]

Q.5 a) Explain the following terms in superconductivity : [6]

i) Critical Magnetic field.

ii) Meissner effect.

b) Define (i) magnetic field strength (ii) magnetic induction (iii) magnetic permeability. Write relation between them. [4]

c) The transition temperature Tc for lead is 7.26 K. The critical magnetic field at 0K, i.e. Hc (0) is 8×10^5 A/m. It is to be used as a super conductor subjected to a magnetic field Hc (T) of 4×10^4 A/m. At what maximum temperature T, it can be operated without losing its superconductivity. [4]

d) What is super conductivity? Differentiate between type I & type II super conductors (any three). [3]

OR

Q.6 a) Define superconductivity with resistance Vs temperature graph and example. [6]
Explain zero electrical resistance in super conductivity.

b) Distinguish between diamagnetism, paramagnetism and ferromagnetism (two points each). [4]

c) Define with unit : (i) Magnetic field strength (H) (ii) Magnetization(M) [4]

d) For Niobium, if critical temperature Tc is 11.3 K and critical magnetic field at 0K is, Hc (0) is 2×10^5 A/m, Calculate critical magnetic field Hc (T) at T = 4.2K [3]

Q.7 a) Explain electrical and mechanical properties of nanoparticles. [6]

b) An ultrasonic pulse of frequency 130 kHz is sent through a block of steel. [4]
echo pulse is received after 1.695 s. If velocity of ultrasonic in steel is 5900m/s, calculate the thickness of the steel block and wavelength of the pulse.

c) Explain in brief how acoustic emission technique is used in non-destructive [4]
Testing

d) Explain in brief, the principle of radiography testing technique [4]

OR

Q.8 a) What is non-destructive testing ? State types of non-destructive techniques ? [6]
Explain ultrasonic testing technique for flaw detection.

b) What is nanotechnology ? Explain applications of nanotechnology in electronic [4]
field.

c) Write applications of nanotechnology in the field of automobiles. Explain any one application in brief. [4]

d) Distinguish between Destructive and Non Destructive testing (any two points) [3]

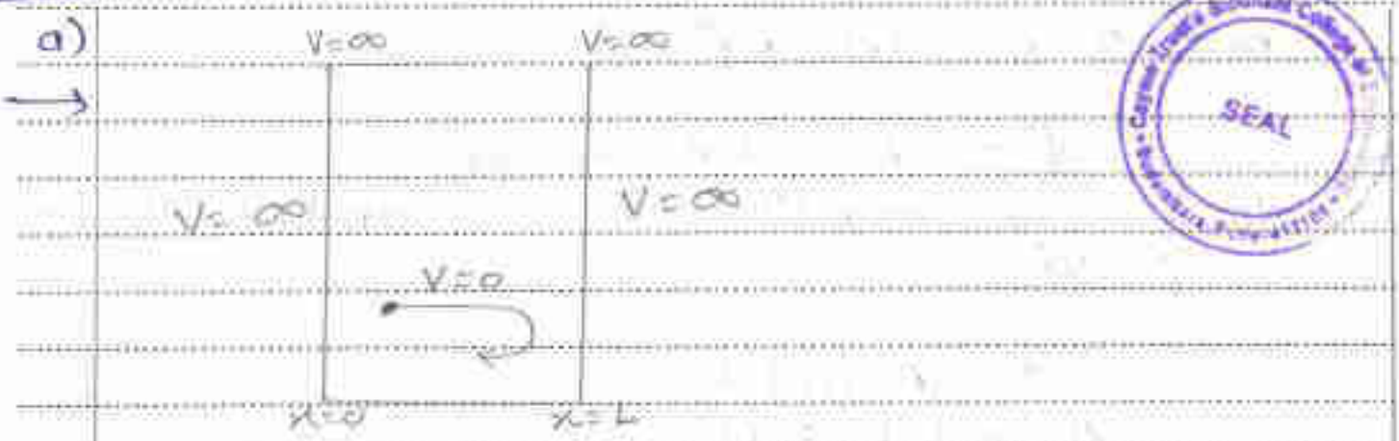
Q. No	1	2	3	4	5	6	7	8	9	10	11	12	Total	Signature of Examiner
Marks	13	—	15	—	13	—	16						57	
Q. No	1	2	3	4	5	6	7	8	9	10	11	12	Total	Signature of Examiner
Marks														

Use of Coloured pencil or ink is strictly prohibited except in case of Diagrams and Sketches
(Write on both sides and start writing on this page)

Q.1

a)



- consider a particle in 1D rigid box the velocity of particle is zero inside the box (V=0) and the velocity infinite outside the box (V=∞)
- The particle is enclosed in rigid box
- The particle cannot escape outside the box hence the wavefunction $\psi = 0$ at

$V = 0$ $\quad 0 > x > L$

$V = \infty$ $\quad x \leq 0$ and $x \geq L$

By using schrodinger time dependent wave equation

$$\nabla^2\psi + \frac{2m}{\hbar^2}(E-V)\psi = 0 \quad \text{---(1)}$$

when $V=0$ the eqn becomes

$$\frac{d^2\psi}{dx^2} + \frac{2mE\psi}{\hbar^2} = 0$$

put $\frac{2mE\psi}{\hbar^2} = k^2$ ---(2)

the solution of eqn (2) is

$\psi(x) = A\sin kx + B\cos kx$ ---(3)

at the

we use cond^n $\psi = 0$ and $x = 0$ in eqn (3)

$0 = 0 + B$

$\therefore \boxed{B = 0}$

put $B=0$ in eqn (2)

$\therefore \psi = A\sin kx$ ---(4)

Now use cond^n $\psi = 0$ and $x = L$ in eqn (4)

$0 = A\sin kL$

$\therefore A\sin kL = 0$

$\sin kL = 0 \quad \ldots (A \neq 0)$

$kL = n\pi$

$k = \frac{n\pi}{L}$

$\therefore$ put $k = \frac{n\pi}{L}$ in eqn (4) we get

$$\boxed{\psi_n = A\sin\left(\frac{n\pi x}{L}\right)} \quad \ldots (n = 1, 2, 3)$$

where

$$k^2 = \frac{2mE\psi}{\hbar^2}$$

$$\therefore \frac{n^2\pi^2}{L^2} = \frac{2mE\psi}{\hbar^2}$$

$$\therefore E_n = \frac{n^2 h^2}{8mL^2}$$

This is eqn of energy of particle enclosed in 1D rigid box

b) Heisenberg's uncertainity principle
- It state that it is impossible to determine simultaneously and accurately the position and momentum of particle.

measurment position is Δx and momentum is ΔP this are greater than or equal to plank's constan h

$$\therefore \Delta x \Delta P \geq \hbar$$

more accurately

$$\Delta x \Delta P = \frac{h}{2\pi}$$

c) Given :-

$E = 1 keV$ $\quad e = 1.6 \times 10^{-19} C$

$h = 6.63 \times 10^{-34} Js$

$m = 9.1 \times 10^{-31} kg$

$$\lambda = \frac{h}{\sqrt{2mE}}$$

$$\lambda = \frac{6.63 \times 10^{-34}}{\sqrt{2 \times 9.1 \times 10^{-31} \times 1 \times 1.6 \times 10^{-19}}}$$

$$\lambda = 2.27 \times 10^{-34}$$

d) The kinetic energy of moving particle is given by

$$E = \frac{1}{2} mv^2$$

multiply m by R.H.S

we can also write this eqn in below form

$$E = \frac{m^2 v^2}{2m}$$

$$E = \frac{p^2}{2m} \quad \therefore \left(p = mv \;\; \therefore p^2 = m^2 v^2 \right)$$

$$\therefore p^2 = 2mE$$

$$\therefore p = \sqrt{2mE}$$

de Broglie wavelength is

$$\lambda = \frac{h}{p}$$

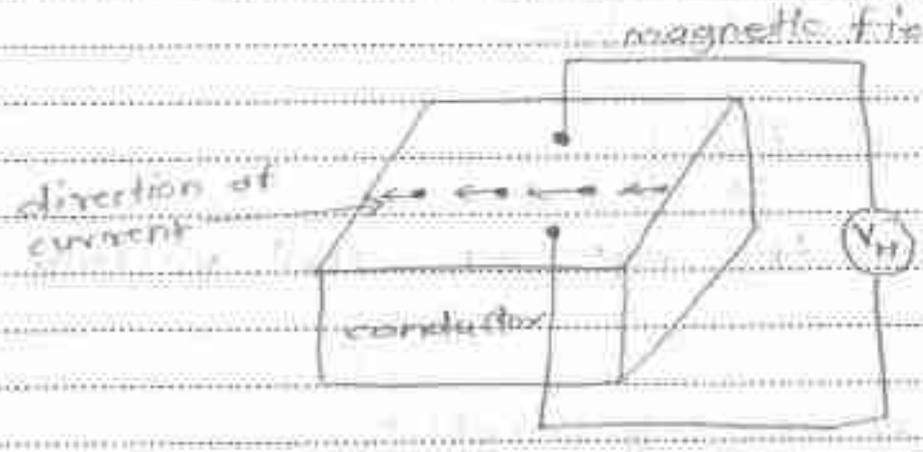
$$\therefore \lambda = \frac{h}{\sqrt{2mE}}$$

This is the expression for de Broglie wavelength for particle when it is moving with kinetic energy E.

Q.3

9) Hall effect

- When the magnetic field is applied perpendicular to the direction of current then the voltage is produce along the both magnetic field and current(I) this is called as Hall effect



- Current produced in magnetic field is eE_H
- magnetic field is BeV

$$\therefore eE_H = BeV \quad \text{---} (1)$$

$$E_H = BV \quad \text{---} (2)$$

The current eqn is

$$I = neVA$$

$$\therefore V = \frac{I}{neA}$$

put the value of V in eqn (2)

$$E_H = \frac{BI}{neA}$$

$$E_H = \frac{V_H}{d}$$

$$\therefore \frac{V_H}{d} = \frac{BI}{neA}$$

$$V_H = \frac{BId}{neA}$$

$$\therefore V_H = \frac{BI}{new} \quad \text{---} \quad (A = w \times d)$$

6

$\therefore$ Hall coefficient is

$$\Rightarrow \boxed{R_H = \frac{1}{ne}}$$

$$\Rightarrow \boxed{\therefore V_H = R_H \frac{BI}{w}}$$

This is the eqn of Hall voltage

b) Fermi level in semiconductor

- Highest energy occupied by electron is called as fermi level.

Position of fermi level in P type

6

Position of fermi level in N type

c) * Advantages of solar cell
- It is non polluting, environment fiendly
- High energy production in less time

* Application
- It is used in ~~satellite~~ satellites
- It is used in aerospace.
- It is used in water heaters like solar water heater

d) Given:-

$w = 1\ mm$

$R_H = 6 \times 10^{-7}\ m^3/C$

$B = 1.5\ T$

$I = 200\ A$

$$V_H = R_H \frac{BI}{w}$$

$$= \frac{6 \times 10^{-7} \times 1.5 \times 200}{1.6 \times 10^{-19} \times 1}$$

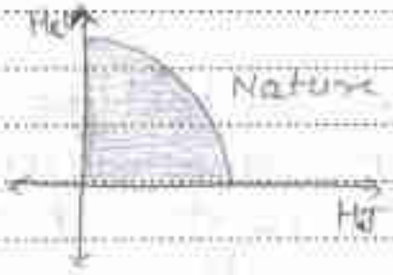
$$\boxed{V_H = 1.8 \times 10^{3}\ V}$$

Q.5

a)

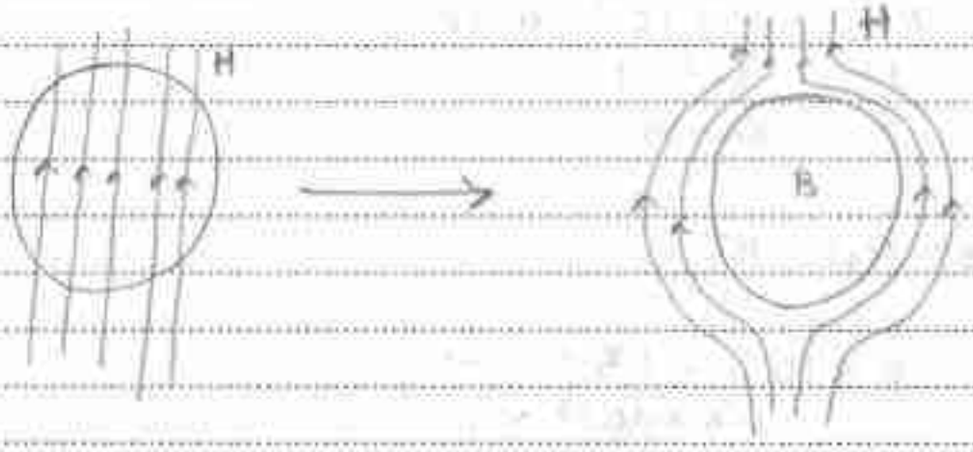
→ i) Critical magnetic field

- When the sufficient voltage is required to destroy superconductivity and restore to its original position.



$$H_c(0) = H_c(T)\left[1 - \left(\frac{T}{T_c}\right)^2\right]$$

ii) Meissner effect



- When the semiconductor is cooled to its critical temperature(T_c) and magnetic field is applied to the conductor then magnetic field passed outside from the conductor this phenomenon is called as meissner effect.

Use of Coloured pencil or ink is strictly prohibited except in case of Diagrams and Sketches
(Write on both sides and start writing on this page)

Q5

b) i) Magnetic field strength (H)

- When the magnitude is expressed by North pole and south pole at any point in magnetic field this is called the strength of magnetic field.

unit - Amperturns/m

$H = \frac{\text{Amperturns}}{\text{length in m}}$

ii) Magnetic induction or Flux density (B)

- It is the no. of lines per unit cross sectional area.

$B = \frac{\phi}{A}$

unit - wb/m^2

- It is also defined as flux per unit area.

SEAL

iii) Magnetic permeability (μ)

- It is defined as the ratio of magne induction to magnetic field strength

$$\mu = \frac{B}{H}$$

unit - ampere turns

8

relation : $\mu = \frac{B}{H}$

c) Given :-

$H_c(0) = 8 \times 10^5$ A/m

$H_c(T) = 4 \times 10^4$ A/m

$T_c = 7.26$ K

$T = ?$

$$H_c(0) = H_c(T)\left[1 - \left(\frac{T}{T_c}\right)^2\right]$$

$$8 \times 10^5 = 4 \times 10^4 \left[1 - \left(\frac{T}{7.26}\right)^2\right]$$

8

$$\frac{8 \times 10^5}{4 \times 10^4} = 1 - \frac{T^2}{1.2 \times 10^{36}}$$

$$T = 0.5\,K$$

d) Super conductivity

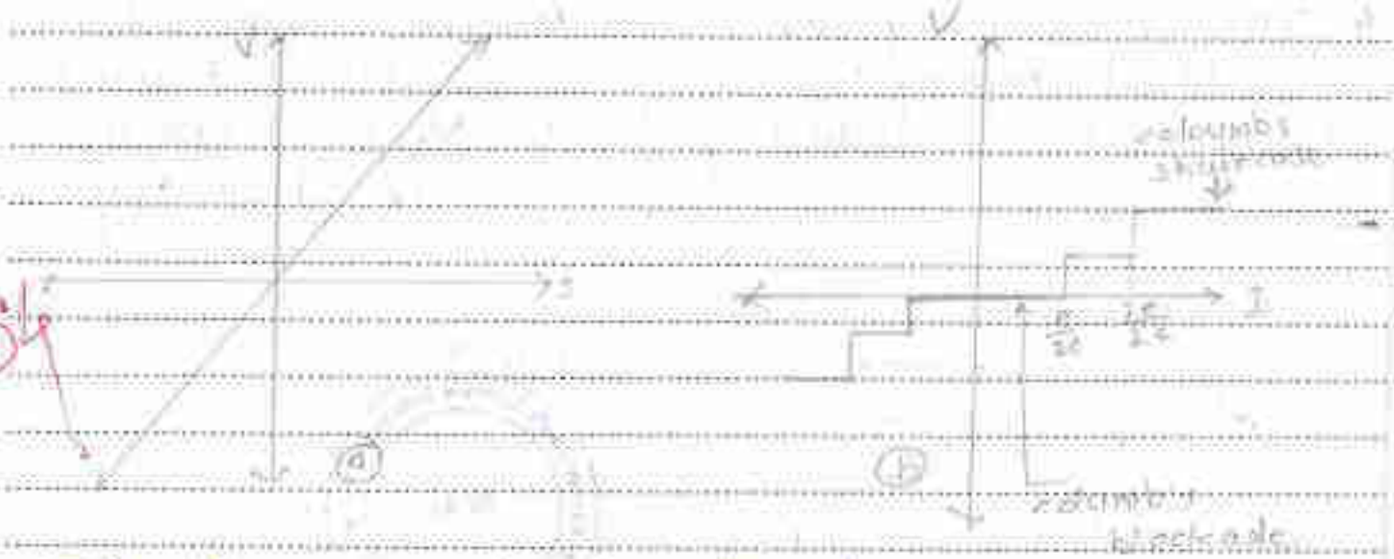
- It is defined as the decrease the resistiv of material and increase the conductivity

Type I	Type - II
1) These are diamagnetic in nature	1) These are not diamagnetic in nature
2) This follows meissnner effect	2) This doesn't follow meissnner effect
3) The critical temperature is very low i.e $0.1\,T$	3) Critical temperature is very high i.e $0.1 << T$
4) This have only one critical temp. T_c	4) These have two critical temp. T_c
5) low use in industry	5) Very high use in industry

Q.7

a) Electrical properties

- Electrical resistivity depends upon the grain size
- If the particle is small then the resistivity is high.
- It the ~~current~~ voltage is applied to bulk material then it obey ohm's law ant the nano-particles varries current and voltage both.



~~If the current is at~~

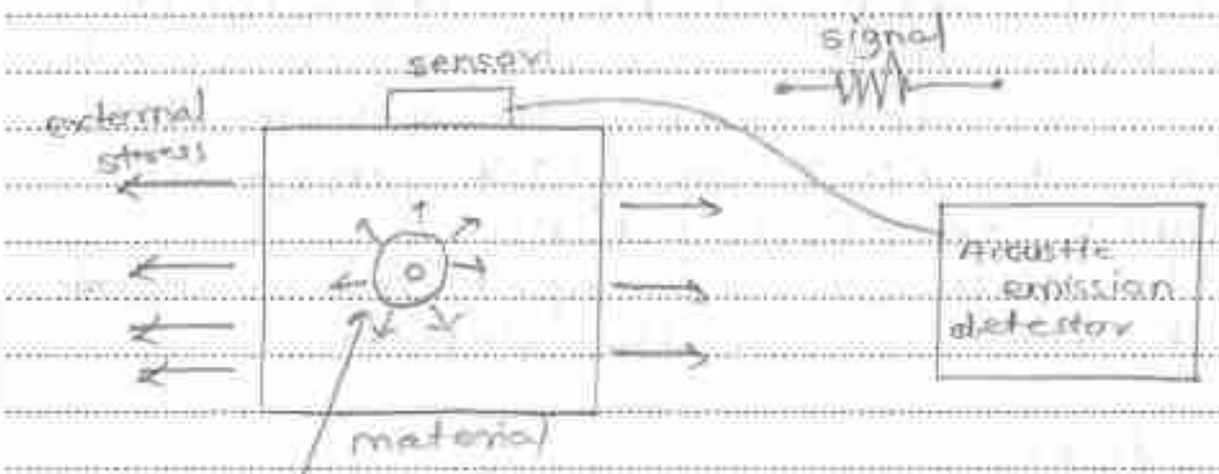
- If the current flowing through the particle the electrons moves if no current is flowing then no electrons flow.
- Columbs blockde is shown in fig (b) at the zero current and columb stain case is also shown.

b) Mechanical properties

- The mechanical properties like hardness, ductility and elasticity are depends upon the imperfection and impurities in material.
- If the impurities are less in the material then it is said to be pure material.
- If voltage is applied to bulk material then conductivity varries with grain size in nanomaterials when grain size is decreases then conductivity increases

c) Acoustic emission technique

- Acoustic emission technique is the non-destructive ~~test~~ technique which is used to finding and locating defect in component (material)

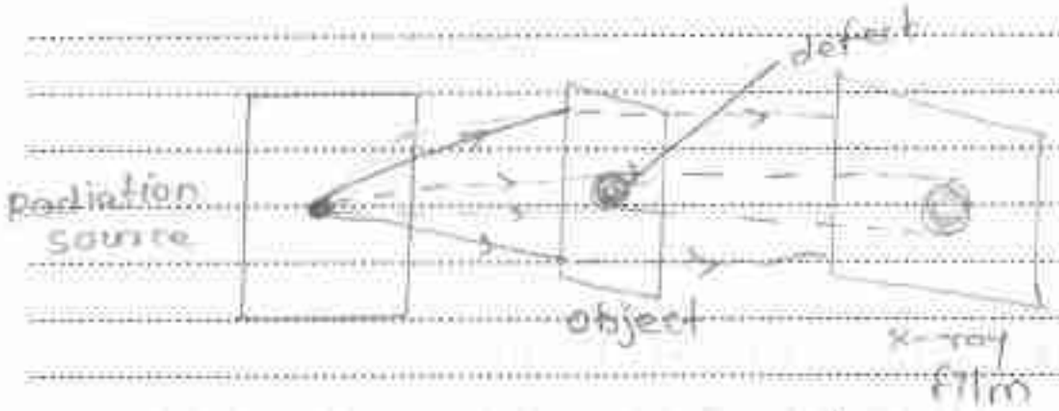


- When the pressure is appied on material then the ~~the~~ material starts to deformation
- Cause of pressure and deformation the waves are emitted and passed out to the crack this waves are called acoustic emission waves
- This waves are detected by sensor and this information in signal send to the Acoustic emission detector

Applications:

- This is used in welding and soldering

d) Radiography testing technique



- When the x-ray or γ-ray's are passed by radiation source on the object.
- This rays are partially absorbed or partially reflected from the object.
- But when there is a defect in object then rays have small thickness in the region of defect and large image is obtained on x-ray film.
- By the help of x-ray film we can detect the size of the defect.

Applications:-

1) By using this technique we can detect crack, hole, cavity in object.

b) $f = 130\ KHz$

$t = 1.69\ s$

$V = 5900\ m/s$

$$\lambda = \frac{V}{\mu}$$

$$= \frac{5900}{130}$$

$$\boxed{\lambda = 45.38}$$

F.E. PRELIMINARY EXAMINATION

SEMESTER – II A.Y 2022-23

PROGRAMME OF F.E. (2019 COURSE) (CREDIT SYSTEM)

INSTRUCTIONS FOR CANDIDATES

- Candidates are required to be present at the examination center, THIRTY MINUTES before the stipulated time.
- Candidates are forbidden from taking any material into the examination hall that can be treated as a malpractice.
- Candidates are requested to see the Notice Board at their center of examination regularly for changes if any that may be notified later in the program.
- No request shall be granted for change in time or date for the University Examination on any ground.
- Candidates are requested to note the Day, Date and Time of Paper.
- Candidates are permitted to use stencils at the time of examination.
- The exchanges of side-rules, drawing instruments of other materials used in the examination hall is not permitted at the time of examination. Candidates must bring their own instruments and will not be allowed to borrow from each other under any circumstances.
- Use of non-programmable battery operated electronic pocket size Calculator is allowed. The exchange of Calculators is not allowed. Electronics Devices including mobile are not allowed at the time of examination.
- The written examination will be conducted in the following order.

SIDDHANT COLLEGE OF ENGINEERING
F.E. PRELIMS EXAMINATION
ENGINEERING PHYSICS
(2019 PATTERN) (Semester-II)

[Time: 2 Hour 30 Minutes] *[Maximum Marks: 70]*

Instructions to the candidates:

1) *Attempt Q. No. 2 or 3, Q. No. 4 or 5, Q. No. 6 or 7, Q. No. 8 or 9*
2) *Neat diagrams must be drawn wherever necessary.*
3) *Figures to the right indicate full marks.*
4) *Assume suitable data, if necessary.*

Q1. Multiple choice questions: *[10]*

1) The wavelength λ associated with a particle of mass m moving with velocity v is given by

a) h/ mv b) mv/ h c) hv/ m d) m/hv

2) A solar cell work on the principle of

a) Photoelastic effect b) Photoluminescence effect
c) Photovoltaic effect d) Photoconductive effect.

3) Addition of pentavalent impurity to a semiconductor creates many .....

a) free electrons b) holes c) valence electrons d) bound electrons

4) In an intrinsic semiconductor, the number of free electrons .....

a) equals the number of holes b) is greater than the number of holes

c) is less than the number of holes d) none of the above

5) In nanomaterials, which of the following statement is correct

a) Surface to volume ratio is very small
b) Surface to volume ratio is large
c) Surface to volume ratio is 1 (unity)
d) None of the above

6) The magnetic lines of force cannot penetrate the body of a superconductor, a phenomenon is known as

a) Isotopic effect b) BCS theory c) Meissner effect d) London theory

7) The transition temperature of mercury is—

a) 7.5 K b) 12 K c) 4.8 K d) 4.2 K

8) The critical temperature is that temperature where

a) the resistivity of a superconducting metal drops to zero

b) the current flowing through a superconductor is minimum

c) the magnetic field inside a superconductor becomes constant

d) none of these

9) The temperature at which the conductivity of material becomes infinite is called....

a) Critical temperature b) Absolute temperature
c) Mean temperature d) Crystallization temperature

10) The maximum current that can be passed through a superconductor is called....

a) Supercurrent b) Optimum current c) Critical current d) None

Q2. a) Derive an equation for energy of a particle enclosed in 1D rigid box or in an infinite potential well. [6]

b) State and explain Heisenberg's uncertainty principle. [5]

c) Calculate de Broglie wavelength of electron having kinetic energy 1KeV [4]

OR

Q3. a) Derive Schrodinger's time independent wave equation. [6]

b) State the de Broglie hypothesis and explain any three properties of matter waves. [5]

c) Lowest energy of an electron trapped in potential well is 38 eV. Calculate the width of well in A.V. [Given : Mass of electron 9.1 × 10-31 kg, plank constant 6.63 × 10-34 J-s, charge on e – 1.6 × 10-19 C]. [4]

Q4. a) Explain Hall effect with figure. Derive the equation of Hall voltage and Hall coefficient. [6]

b) A copper strip 2.0 m wide, 1.0 mm thick is placed in a magnetic field of 1.5T. If a current of 200 A is set up in the strip, calculate the Hall voltage that appears across the strip. Assume RH = 8 × 10-7 m3/C. [5]

c) State Hall effect. Derive an equation of Hall voltage. [4]

OR

Q5. a) Using Fermi Dirac probability distribution function, derive an expression for the position of Fermi energy level in the intrinsic semiconductor. [6]

b) What is fermi level in a semiconductor? With the neat labelled diagram, draw the position of fermi level in N Type & P Type semiconductor at 0° K. [5]

c) Calculate the mobility of charge carriers in doped silicon whose conductivity is 100 per .m and the Hall coefficient is 3.6 × 10-4 m3/c.3 [4]

Q6. a) What are SQUID ? Explain any two applications of SQUID. [6]

b) Explain DC and AC Josephson effect with diagram. [5]

c) The transition temperature of lead is 7.2 K. However, at 5 K it loses the superconducting property if subjected to magnetic field of 3.3 × 104 A/m. Find the maximum value of H which will allow the metal to retain its super conductivity at 0 K. [4]

OR

Q7. a) Define superconductivity with resistance Vs temperature graph and example. Explain zero electrical resistance in super conductivity. [6]

b) Distinguish between diamagnetism, paramagnetism and ferromagnetism (two points each). [5]

c) Define with unit : (i) Magnetic field strength (H) (ii) Magnetization(M) [4]

Q8. a) Explain electrical and mechanical properties of nanoparticles. [6]

b) An ultrasonic pulse of frequency 130 kHz is sent through a block of steel. The echo pulse is received after 1.695 s. If velocity of ultrasonic in steel is 5900 m/s, calculate the thickness of the steel block and wavelength of the pulse. [5]

c) Explain in brief how acoustic emission technique is used in non-destructive testing [4]

OR

Q9. a) What is non-destructive testing ? State types of non-destructive techniques ? Explain ultrasonic testing technique for flaw detection. [6]

b) What is nanotechnology ? Explain applications of nanotechnology in electronic field. [5]

c) What are nanoparticles? What is nanotechnology? Explain the optical property of nanoparticle. [4]

Q2]

a)

⇒ Schradingers wave time independent wave equation.

The general equation for wave is given by the.

$$\frac{\partial^2 \psi}{\partial x^2} = \frac{1}{v^2}\left(\frac{\partial^2 \psi}{\partial t^2}\right)$$

for the wave equation with co-ordinates of x, y, z and 3 dimensional object it is given by.

$$\frac{\partial^2 \psi}{\partial x^2} + \frac{\partial^2 \psi}{\partial y^2} + \frac{\partial^2 \psi}{\partial z^2} = \frac{1}{v^2}\left(\frac{\partial^2 \psi}{\partial t^2}\right)$$

$$\left(\frac{\partial^2}{\partial x^2} + \frac{\partial^2 \psi}{\partial y^2} + \frac{\partial^2 \psi}{\partial z^2}\right)\psi = \frac{1}{v^2}\left(\frac{\partial^2 \psi}{\partial t^2}\right)$$

where the general derived equation also can be given by

$$\Delta \psi(x,y,z) = \frac{1}{v^2}\left(\frac{\partial^2 \psi}{\partial t^2}\right)$$

$$\psi(x,y,z) = \psi_0 e^{-i\omega t}.$$

$$\frac{\partial \psi}{\partial t} = \psi_0 (e^{-i\omega t}) \quad \text{---} *$$

Differentiating the above eqn with respect to t we get

$$\frac{\partial \psi}{\partial t} = \psi_0 \, i\omega \, (e^{-i\omega t}) \quad \text{---} ①$$

Again differentiating the eqn ① w.r.t:

$$\frac{\partial^2 \psi}{\partial t^2} = \psi_0 (-i\omega)(-i\omega) e^{-i\omega t}$$

h)

$$= \psi_0 (-1)^2 (i\omega)^2 e^{-i\omega t}$$

$$= \psi_0 (1)(\omega)^2 e^{-i\omega t}$$

$$= (\omega)^2 (\psi) \quad \text{— from — (x)}$$

g)

b)

De Broglie Hypothesis :- i) In 1911 De Broglie proposed that the wave has two nature one is particle nature and matter nature.

where the wave has its particle nature associated with it.

ii) He also state that behaviour of wave is not uniform.

iii) It was derived By Einsteins postulate

$$E = mc^2 \quad \text{— (i)}$$

where

$$E = h\nu \quad \text{— (ii)}$$

From (i) and (ii):

$$h\nu = mc^2.$$

$\lambda = \frac{h}{mc^2}$

$\lambda = \frac{h}{mc^2}$ equating eqn (i) and (ii)

$\lambda = \frac{h}{mv}$ where $c = v^2$.

$\therefore \lambda = \frac{h}{mv}$.

The wavelength associated with particle of mass m moving with velocity is given by h/mv

where

m = mass of electron

h = planks constant

v = velocity of electron.

c].

$E = 38\ eV$

$m = 9.1 \times 10^{-31}$

$h = 6.63 \times 10^{-34}$

$e = 1.6 \times 10^{-19}$.

$E = \frac{nh^2}{8mL^2}$.

$L^2 = \frac{nh^2}{8mE}$

$L^2 = \frac{1 \times (6.63 \times 10^{-34})^2}{8 \times 9.1 \times 10^{-31} \times (38)}$

$= \frac{6.63 \times 10^{-34}}{2.766 \times 10^{-24}}$.

$L^2 = 2.396 \times 10^{-10}$

$L = 1.547 \times 10^{-5}$

Q4]

a)

⇒ Hall effect :-

i) Hall effect state that the magnetic field passing from the conductor is perpendicular to the current flowing thraigh the circuit.

ii) In 1927 Edwin Hall has found the Hall effect and given derivation for it.

magnetic field is given by.

F.B = B.e.V

when current pass it is balanced by magnetic field.

∴ The equation becomes.

E.e = B.e.V

E = B.V ——— (1)

where as

$$E = \frac{V_H}{d}$$

$$\frac{V_H}{d} = B \cdot V$$

$$V_H = dB \cdot V \quad \text{——— (x)}$$

for the Hall voltage velocity can be derived by

$$I = n e i V A$$

$$\frac{I}{n e i A} = V \quad \text{——— (xi)}$$

putting value of eqn (iii) in (ii)

$$V_H = dB \frac{I}{n e i A}$$

Here we can take nei seperate to form eqn

$$V_H = \frac{1}{nei} \cdot \frac{d \cdot BI}{A}$$

Here we get eqn for Hall voltage.

where Hall coefficient can be derived by

$$\rho = \frac{1}{nei} \quad \text{——— (xi)}$$

putting value in eqn.

$$V_H = \rho \cdot \frac{d \cdot BI}{A}$$

$$V_H = \frac{1}{nei} \quad \frac{d \cdot BI}{A}$$

Hall coefficient $(\rho) = \frac{1}{nei}$

Q4]

9).

=> Hall effect :-

i) Hall effect state that the magnetic field passing from the conductor is perpendicular to the current flowing through the circuit.

ii) In 1927 Edwin Hall has found the Hall effect and given derivation for it.

magnetic field is given by.

$F_B = B.e.V$

when current pass it is balanced by magnetic field

∴ the equation becomes

$E.e = B.e.V$

$E = B.V$ ——— (1)

8)

⇒

$w = 2.0\ mm$

$t = 1.0\ mm$

$B = 1.5\ T$

$I = 200\ A$

$R_H = 6 \times 10^{-7}\ m^3/C$

$V_H = R_H \cdot \frac{I \cdot \Delta B}{A}$

$= 6 \times 10^{-7} \cdot \frac{200 \cdot 2.0 \times 1.5}{}$

$= 3.6 \times 10^{-4}$

9)

⇒

Hall effect :-

when the magnetic field is applied on the conductor the magnetic lines are perpendicular to the flow of current.

Working :-

when the current pass through conductor the electrons flow in the one direction in the straight line But due the disturbance in the way of electrons they get seperate where the positive electrons and holes get shifted towards the edges of conductor.

Here the voltmeter is connected parallel to the current flows at ends of the conductor.

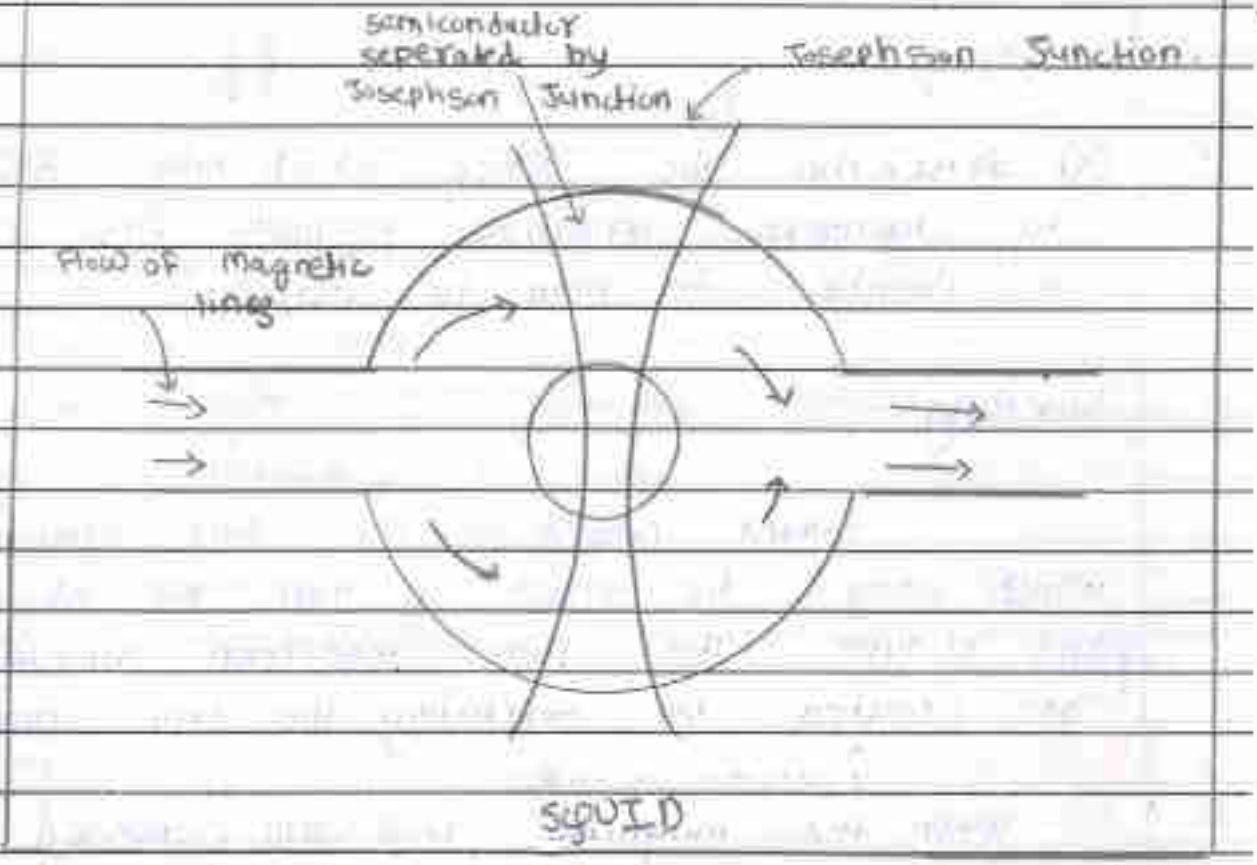
Q6]

a)



SQUID

① Squid is superconducting interference device which is most sensitive device known to man

② The most uncertain and smallest, sensitive magnetic field can be measured with help of it.

③ The squid consists of the two semiconductor which is seperated by two Josephson Junction.

④ The device can be configure as the magnetometer.

6

P. No./Q. No.

(5) Squid is the the device which has ability to measure sensitive magnetic field which is possible to man to detect.

Working :-

Squid consist of the two semiconductor which may be varies on their use as P and N Type. The Two Josephson Junction are created by seperating the two semiconductor

When the magnetic lines are passed through one end of squid it is Detected by the Josephson functions and they get passed From other end.

Application :-

(1) Squid is used to detect the magnetic field created inside the brain.
(2) squid to used to study the strain caused inside the rock Forming.
(3) It has ability to detect smallest magnetic field inside living organism.
(4) squid is used by suentist to study the strain and stress caused inside earth.

Working :-

i) when the DC current is passed to the semiconducor there is no difference in the voltage the infinity current pass through semiconductor.

ii) The insulating layer caused (c) Resistance electric current & voltage.

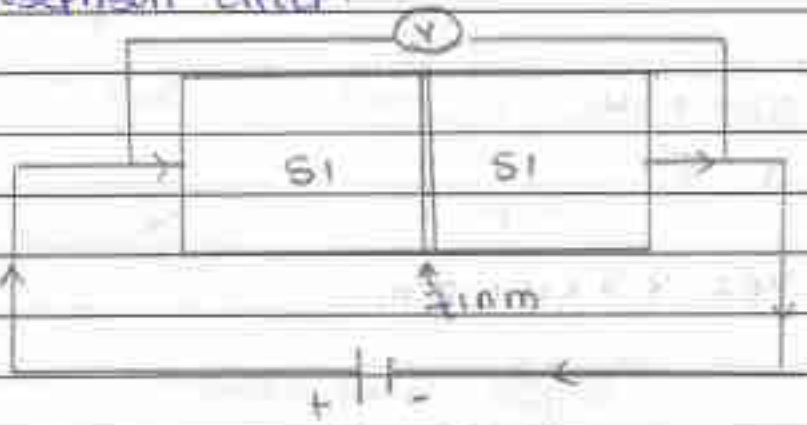
iii) The equation of DC Joseph effect is given by

$I_s = I_c \sin\phi$.

SAVITRIBAI PHULE PUNE UNIVERSITY

प्र. क्र./Q. No.

ii) Ac Josephson effect.



Working :- i) when the Ac current is passed through the Junction. The Radio frequency and oscillations are produced. and Infinite ammount of current get flows.

ii) The equation for Ac Josephson effect is given by.

$$R_H = \frac{2eVh}{2eVh} \cdot \frac{1}{}$$

प्र. क्र./Q. No.

c]

$T_c = 7.2K$.

$T = 5K$.

$H_c = 3.3 \times 10^4$ A/m.

$$H_c = H_0 \left(1 - \left(\frac{T}{T_c}\right)^2\right)$$

$$\frac{H_c}{\left(1 - \left(\frac{T}{T_c}\right)^2\right)} = H_0$$

$$\frac{3.3 \times 10^{-4}}{\left(1 - \left(\frac{7.2}{5}\right)^2\right)}$$

$$\frac{3.3 \times 10^{-4}}{-1.0736}$$

$$= -3.0 \times 10^{-4}$$

08].	
a).	
	1) Electrical properties :-
	① When the size of bulk material is reduced to the nano size with respect to their size Electrical properties also get changed
	② The flow of electrons in the conductor is due to mobility of electrons carrier and these property work different with decreasing size.

SEAL

INSTRUCTIONS

सूचना

1. DO NOT WRITE NUMBER ANYWHERE EXCEPT AT THE PLACE PROVIDED FOR. IF SEAT NUMBER IS WRITTEN ANY WHERE ELSE IT WILL BE TREATED AS UNFAIRMEANS AND THE PERFORMANCE WILL BE TREATED AS NULL AND VOID FOR THE ENTIRE EXAMINATION.

१. नियोजित जागेशिवाय अन्यत्र आसन क्रमांक लिहू नका. अन्यत्र आसन क्रमांक लिहिल्यास ती गोष्ट अनुचित समजली जाईल आणि त्या संपूर्ण परीक्षेच्या संदर्भात परीक्षार्थी म्हणून त्यास बाद ठरविले जाईल.

2. WRITE YOUR ANSWERS IN LEGIBLE HAND. ANSWERS WRITTEN IN AN ILLEGIBLE AND UNDECIPHERABLE HAND ARE LIABLE TO BE MARKED AS ZERO.

२. उत्तरे सुवाच्य अक्षरांत असावीत. अवाचनीय आणि अनाकलनीय अक्षरांत लिहिलेल्या उत्तरांना शून्य गुण दिले जातील.

3. AN ACT OF COPYING OR OF IMPERSONATION AT AN EXAMINATION IS PUNISHABLE UNDER 'THE MAHARASHTRA PREVENTION OF MALPRACTICE AT UNIVERSITY, BOARD AND OTHER SPECIFIED EXAMINATIONS ORDINANCE, 1982'. THE ACT PASSED TO THE EFFECT.

३. कॉपी करणे किंवा दुसऱ्याच्या नावावर परीक्षेस बसणे बाबतच्या कृती 'महाराष्ट्र-प्रीव्हेन्शन ऑफ मालप्रॅक्टिस अॅट युनिव्हर्सिटी, बोर्ड अॅण्ड अदर स्पेसिफाईड एक्झामिनेशन्स ऑर्डिनन्स, १९८२' त्यानुसार संमत केलेला कायदा या अन्वये दंडही असेल.

4. Hollow Craft is to be pasted on space marked with dotted line.

४. होलो क्राफ्ट स्टीकर विहित जागेवर लावावी.

प्र. क्र./Q. No.	

3) E.g :

① The conductivity of ceramic increase with decrease in size.

② The conductivity of metals such as iron, phosphorus, the electrical conductivity decrease with the decrease in size.

2] Mechanical properties :-

① The material at the bulk has the properties such as elasticity, malability ductility and hardness

② The mechanical properties of metal show.

much variation with the nanosize.

(3) The lubrication property at nanosize increases. and show much variation.

4) Eg (1) The ductility of iron with nanosize decreases gradually

(2) Hardness of diamond show little variation with decrease in size.

b)

Soln

$t = 1.695\ s$

$V = 5900$.

$$T = \frac{Vt}{2}$$

$$= \frac{5900 \times 1.695}{2}$$

$$= 10000.5$$

2

$T = 5000$

$T = 5000$ mm.

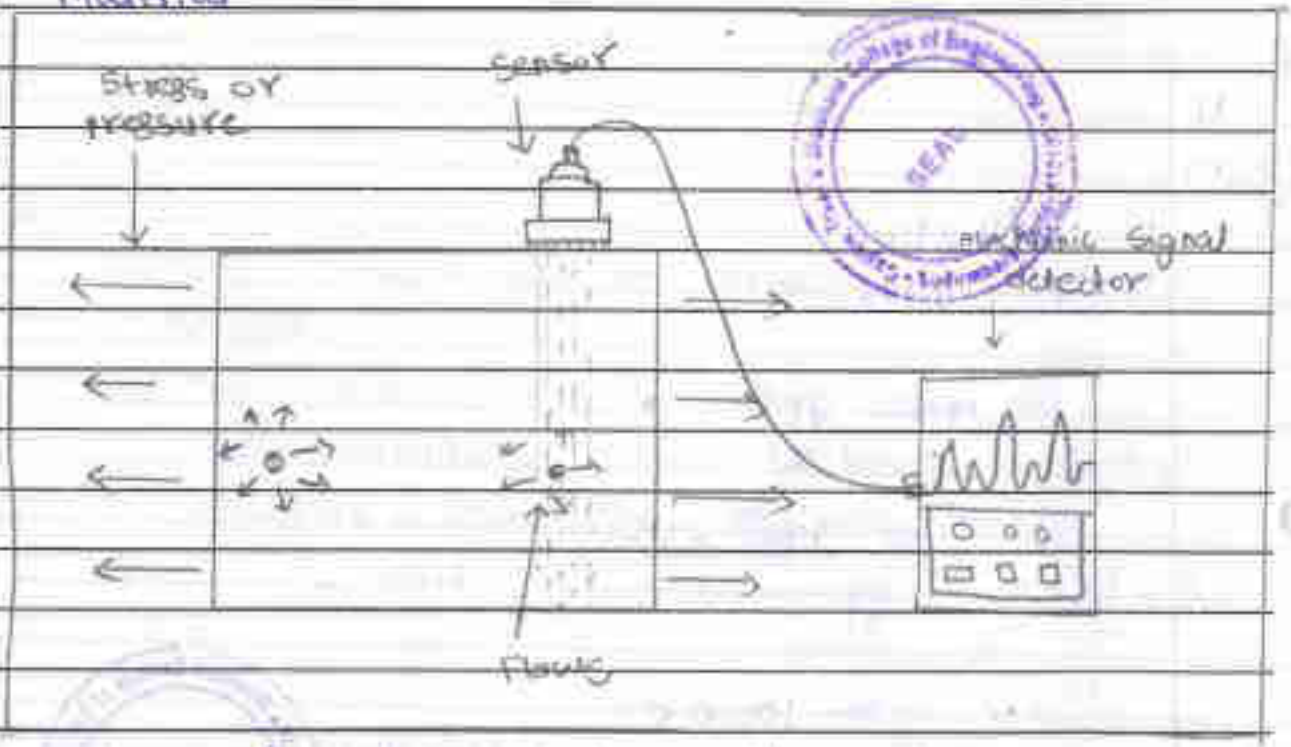
T. No./Q. No.

Q7.

=> Acoustic Emission :-

i) Acoustic Emission is the Non-destructive testing method.

ii) This method is used to detect the fault, flaws, leak and crack inside the material.



In Acoustic emission techinek the sensors is used to detect the fault in material Here elastic waves or sound waves are transmitted inside the material when the Pressure is created the fault in the Specimen disturb the Intensity of elastic wave If The crack is greater than 100 nm. the the wave get absorbed the

प्र. क्र./Q. No.	

* Advantages of Ground Hc emission :-

i) Quick Result can be obtained
ii) Response speed can be monitored.
iii) less noisy
iv) There is no need to deted the material again.
* Affordable.
* Disadvantages :
i) maintainance cost is high.
ii) initial cost of electronic device is high.
iii) Exact location of fault cannot be located or Traced.

FE-SEM-I Result Analysis 2022-23

Subject Wise Result Analysis

Sr. No.	Name of Subject	No. of Student Appear	No. of Student Pass	No. of Student Fail	%age of Result	Name of Staff
1	Engineering Maths - I	114 (DIV A and B)	55	59	48.24	Prof. Shilpa Chaugule
		109(DIV C and D)	43	66	39.44	Prof. Avinash Tekale
2	Engg. Chemistry	114	53	61	46.49	Dr Uttam Shinde
3	Engg. Physics	109	46	63	42.20	Prof. Deepak kute
4	Basic Electrical Engg	113	37	76	32.74	Prof. Sonali Gavge
5	Basic Electronics Engg	109	65	44	59.63	Prof. Deepali Bajare
6	System in Mechanical Engg	114 (DIV A and B)	90	24	78.94	Prof. Rushikesh More
		109 (DIV C and D)	85	24	77.98	Prof. Kedar Bhagwat
7	Engg. Mechanics	113	30	83	26.54	Prof. Pooja Patil
8	PPS	109	79	30	72.47	Prof. Ashwini Bhosle

- Total No of Students Appeared = 223
- Total No of Students Failed = 171
- Total No of Students Passed = 52
- **All Clear Result = 23.33%**
